WHAT IS MICROSOFT DYNAMICS 365 BUSINESS CENTRAL, AND SHOULD YOU SWITCH?

The Microsoft Dynamics family. There are similarities between Microsoft's most widely used ERP (Enterprise Resource Planning) solutions, but there are also differences. What you want is the right tool for the job.

Microsoft Dynamics NAV provides full ERP functionality, including finance, manufacturing, CRM (customer relationship management), supply chain, analytics, and e-commerce. Dynamics NAV has been Microsoft's flagship ERP product adopted by businesses in nearly 200 countries. In the spring of 2018, Microsoft rebranded Dynamics NAV as Dynamics 365 Business Central (BC) and stopped marketing Dynamics NAV to new clients.

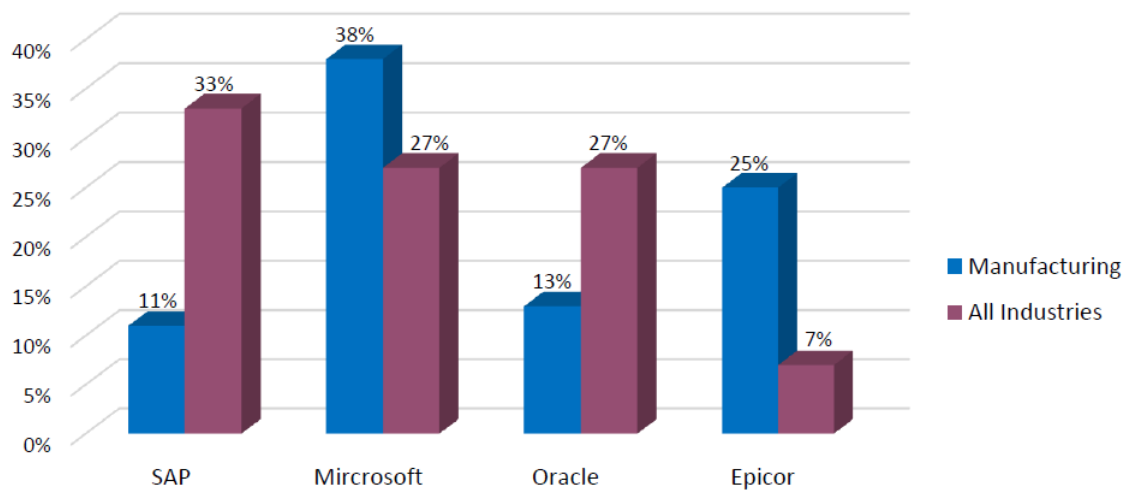

Microsoft Dynamics 365 BUSINESS CENTRAL has more than **130,000 customers** worldwide, adding more than **8,000 customers** yearly.

Dynamics 365 Business Central is the latest version of Dynamics NAV. Dynamics BC is a Cloud solution, and you will still be able to upgrade your solution.

HOW DOES MICROSOFT DYNAMICS 365 BUSINESS CENTRAL HELP MANUFACTURERS MEET CHALLENGES?

Manufacturers are at the forefront of technology-assisted business operations. Change is rapid and consistent, and new skill sets are necessary to keep up with the new technology. Without capable employees to fill the jobs and use the new technology, manufacturing businesses will be unable to respond to market opportunities, support innovation and development of new products, increase production levels, and stay ahead of their competitors.

Microsoft Dynamics 365 Business Central ERP for Manufacturing

Microsoft Dynamics 365 Business Central (D365 BC) allows manufacturing organizations to respond quickly to changing market and production demands.

Dynamics 365 BC offers these benefits: **AS AN END-TO-END VIEW OF BUSINESS**

Manage financial data

Accelerate financial close and reporting with accuracy, while ensuring compliance.

- **Decision support**

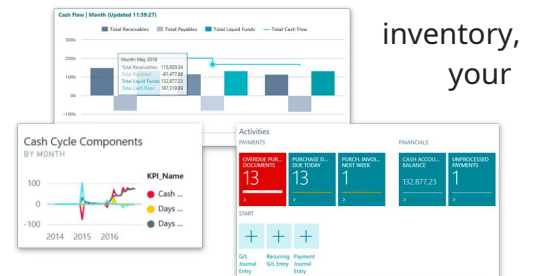

Connect data across accounting, sales, purchasing, and customer interactions to get an end-to-end view of business. Chart financial performance in real time with built-in Power BI reports.

- **Financial close and reporting**

Streamline accounts receivable, accounts payable, and automatically reconcile accounts to close and report on financials quickly and accurately, while maintaining compliance.

- **Forecast accuracy**

Refine financial forecasts by modeling and analyzing data across multiple dimensions. Customize reports using Microsoft Excel integration.

Automate the supply chain

Increase visibility across your supply chain and gain greater control over your purchasing process.

- **Inventory levels**

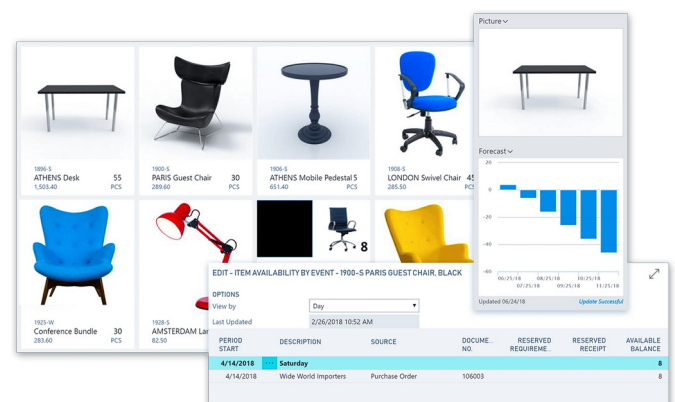

Use built-in intelligence to predict when and what to replenish. Purchase only what you need with dynamically updated inventory levels.

- **Avoid lost sales and reduce shortages**

Maintain the right amount of inventory by automatically calculating stock levels, lead times, and reorder points. Suggest substitutes when requested items are out of stock.

- **Profitability**

Get recommendations on when to pay vendors to use discounts or avoid overdue penalties. Prevent unnecessary purchases through approval workflows.

Sell smarter and improve customer service

Maximize revenue opportunities and better serve customers with built-in recommendations.

- **Value at every touchpoint**

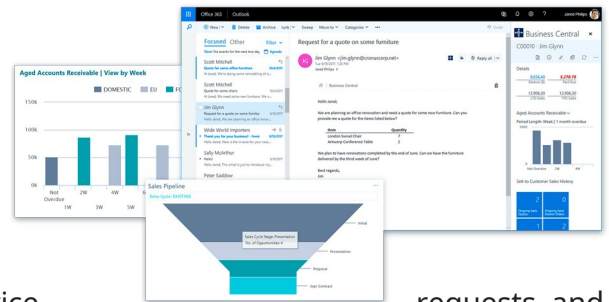

Prioritize sales leads based on revenue potential. Keep track of all customer interactions and get guidance on the best up-sell, cross-sell, and renewal opportunities.

- **Sales productivity**

Act quickly on sales-related inquiries, manage service process payments—all from within Outlook.

- **Exceptional service**

Gain a comprehensive overview of your service tasks, workloads, and employee skills to assign resources and accelerate case resolution.

requests, and

ABOUT [ORYNTIQ-DT](#)?

If you are considering buying or upgrading to Microsoft Dynamics 365 Business Central (365 BC), you may be a bit overwhelmed at the prospect. An excellent way to begin is to choose a Microsoft Provider such as [ORYNTIQ-DT](#) that has the experience, skill, and methodology to ensure a successful implementation.

WHY [ORYNTIQ-DT](#)

Our experts at [ORYNTIQ-DT](#) have performed enough Microsoft Dynamics 365 BC implementations to know what works, and we have identified best practices for the four major steps that lead to success: kickoff, discovery, design and build, and deploy.

- **Step 1: Kickoff:** - The kickoff meeting is the first step of a successful implementation project. It involves your internal ERP team and our experts from [ORYNTIQ-DT](#). You'll work with a dedicated [ORYNTIQ-DT](#) project manager and delivery team. The project manager will review the project plan, introduce the team, clarify project expectations, and schedule a preliminary inspection of your business, plant, or warehouse. Customized documents will be drawn up based on the consultation and review. Documents may include a business scenario register (using cases and test cases), a report register, and data migration templates.
- **Step 2: Discovery:** - In the second step, our project team manager will facilitate discovery workshops. They will spend dedicated time with your key stakeholders and critical users to thoroughly understand how your organization uses its current system and what you hope to accomplish with your new system. We will examine daily activities, documents, processes, and requirements. With the information gathered, the project team will prepare a functional requirements document "FRD" and a gap assessment worksheet. They will include Visio diagrams and a supportive narrative about your business's processes. The gap and scope assessment will show what needs to be accomplished, so a proposal of work and process flows can be drawn up and given to you for approval. Finally, the team creates a setup checklist to guide the environment's data migration and configuration.
- **Step 3: Design and Build:** - At the start of this step, you'll get a chart of accounts, customers, vendors, items, locations, bill of materials, routing instructions, and the work centers or machine centers used to produce the items. Then the project team will lead workshops, taking you and your power users through a deep dive of your business processes using data gathered from the experts in your organization. Some organizations prefer fitting their business processes to the software solution to avoid customizing. Others choose to customize the system to meet their unique needs. The project team can accommodate either preference, yet as a true business partner, our team will challenge requests as needed to ensure benefits outweigh costs in the long run. The project team will then build process flows and technical designs, present plans to your team, and make any necessary tweaks. Once you've approved the design and signed off on the plan, our team will begin development, finalize setup and configuration, complete data migration, perform unit testing, and create a user training plan.
- **Step 4: Deploy:** - In the final step, our project team will train and prepare your users for deployment through acceptance testing. Depending on the number of users and complexity, the project team will either train your users directly or train your trainers, enabling them to train other users. Issues will be documented and remediated. The team will prepare a cutover checklist and conduct a mock cutover. You'll be able to pilot your new system in a controlled setting before going live. Once your user training is complete and all the items on the list have been checked off, the project team will execute a final data conversion, and the system will be ready for widespread company adoption.

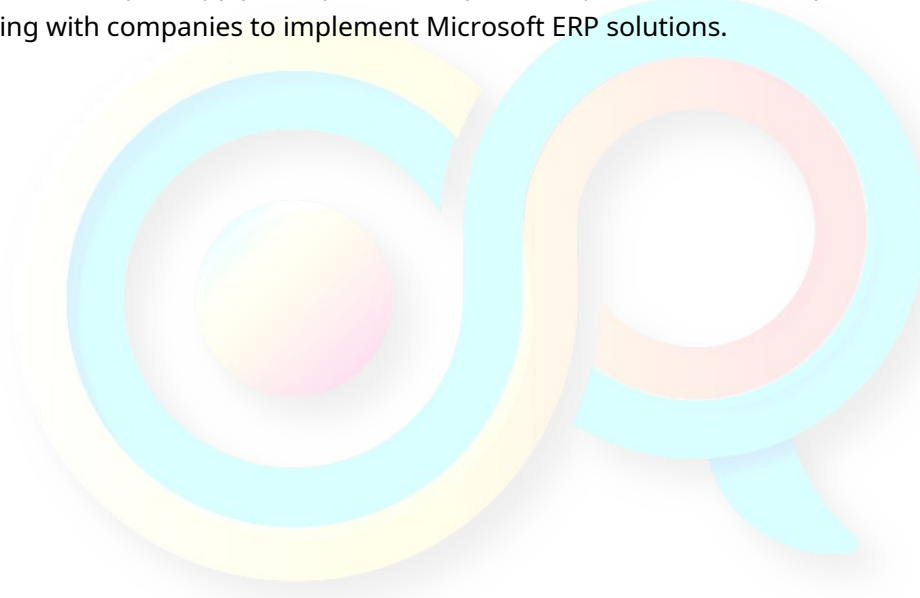

[ORYNTIQ-DT](#) is a Provider for both Microsoft Dynamics and LS Retail, which provides Microsoft Dynamics 365 Business Central, LS 365 Business Central Retail, and LS 365 Business Central Hospitality. It was founded specifically to be an MS D365 Business Central Provider for Africa and the Middle East.

ORYNTIQ-DT is using a strategic approach and systematic methodology to achieve valuable outcomes by providing and implementing solutions that meet customers' business needs and expectations.

Our software services include:

- Software Implementation and project management

- o Diagnostic
- o Analysis
- o Design
- o Development
- o Deployment
- o Operation

- Software Testing
- Software Integration
- Data Migration
- Reports and Workflows Customization

Support and Maintenance

[ORYNTIQ-DT](#) provides robust support services to help customers keep their core business systems running smoothly; [ORYNTIQ-DT](#) offers different support options provided by qualified, certified, dedicated consultants with predefined, rigid service level agreements along with clear escalation processes.

[ORYNTIQ-DT](#) support services include:

- Incident Management
- Periodical Support
- Service Packs and Hotfixes

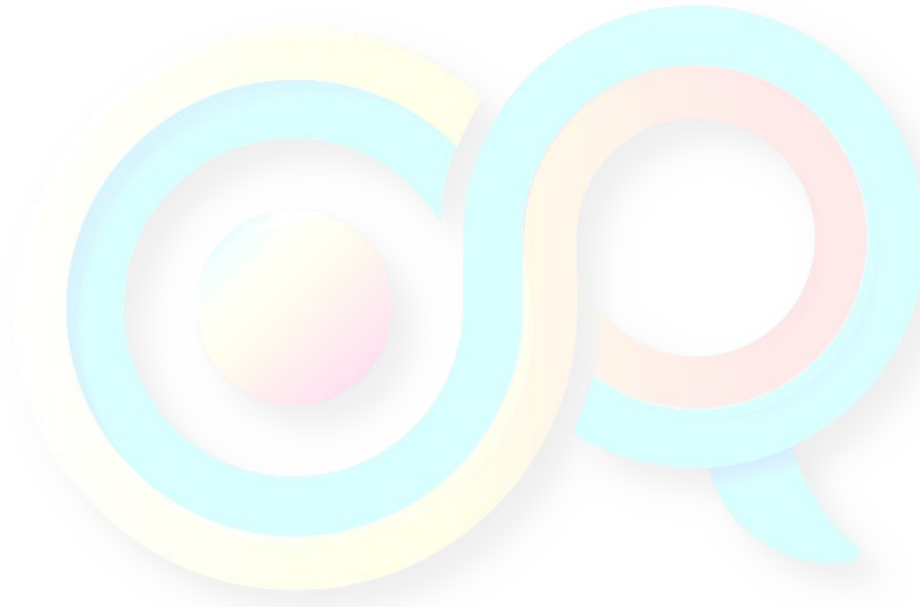

Training

Our extensive training services are flexible enough to match business needs and implement a solution strategy; this is one area where best practices are well established.

[ORYNTIQ-DT](#) training services are designed to fulfill customers' needs as follows:

- Training Needs Assessment.
- Outcome Evaluation and Reporting.

- Technical Training for Technical Staff.
- Software Training for Users.
- On-Job Training and Workshops.

ORYNTIQ-DT SOLUTIONS

MICROSOFT BUSINESS APPLICATIONS & DIGITAL TRANSFORMATION SOLUTIONS

Enterprise Resource Planning (ERP)

Microsoft Dynamics 365 BUSINESS CENTRAL Is an easily adaptable enterprise resource planning (ERP) solution. It helps small, medium-sized, and enterprise businesses automate and connect their sales, purchasing, operations, accounting, and inventory management.

Microsoft Dynamics 365 BUSINESS CENTRAL has more than **130,000 customers** worldwide, adding more than **8,000 customers yearly**.

Enterprise Financial Management

Microsoft Dynamics 365 Finance

Microsoft Dynamics 365 Finance is an advanced financial management solution designed for medium and large enterprises. It provides powerful capabilities for financial consolidation, budgeting, forecasting, cash flow management, compliance, and multi-company operations. The platform delivers real-time financial insights and intelligent automation to improve decision-making, reduce risk, and support sustainable business growth.

Business Intelligence & Analytics

Microsoft Power BI

Microsoft Power BI is a leading business analytics platform that transforms data into interactive dashboards and real-time reports. It enables organizations to monitor KPIs, analyze trends, and gain actionable insights across all business functions. Seamlessly integrated with Dynamics 365, Microsoft 365, and third-party systems, Power BI helps organizations build a data-driven culture and improve performance.

Low-Code Business Applications

Microsoft Power Apps

Microsoft Power Apps enables organizations to rapidly build custom business applications with minimal development effort. Businesses can digitize manual processes, automate workflows, and create mobile or web applications tailored to operational needs. Integrated with Dynamics 365, Microsoft 365, and hundreds of data sources, Power Apps accelerates innovation while reducing development costs and timelines.

Process Automation & Workflow Management

Microsoft Power Automate

Microsoft Power Automate is a powerful workflow automation platform that enables organizations to automate repetitive tasks, streamline business processes, and improve operational efficiency. It connects Microsoft applications, Dynamics 365 solutions, and hundreds of third-party systems to automate approvals, notifications, data synchronization, document processing, and business workflows. By reducing manual effort and increasing process consistency, Power Automate helps organizations accelerate productivity and support digital transformation initiatives.

Power Automate

Field Service & Asset Management

Microsoft Dynamics 365 Field Service

Microsoft Dynamics 365 Field Service helps organizations manage maintenance operations, field technicians, inspections, and service requests efficiently. The solution optimizes scheduling, automates work orders, and improves asset reliability through preventive and predictive maintenance capabilities. It is widely used in

manufacturing, utilities, construction, and asset-intensive industries to maximize productivity and service quality.

Hospitality Management

LS Central Hospitality

LS Central Hospitality is a fully integrated hospitality management solution built on Microsoft Dynamics technology. It combines Point of Sale (POS), inventory management, purchasing, finance, and reporting into a single platform. This unified approach improves operational control, enhances customer experiences, and eliminates integration challenges between multiple systems. LS solutions are trusted by more than 65,000 locations worldwide.

LS Central

LS Hospitality

Retail Management

LS Central Retail

LS Central Retail is an end-to-end retail management solution that unifies store operations, inventory, purchasing, loyalty programs, e-commerce, and financial management. It provides real-time visibility across all sales channels, helping retailers improve customer engagement, optimize inventory, and increase profitability. LS Central supports retailers in delivering a seamless omnichannel experience while maintaining full operational control.
